

# DOCTOR LEAF

Balanced pH  
improves nutrient  
availability

Work in pH  
neutral  
disolutions

Hormone  
Free

Residue  
Free

**CORRECTION pH+**

ESSENTIAL TO ACHIEVE  
THE PERFECT SOLUTION

## PH +

pH Regulator + (pH increase)

pH Regulator + (pH increase) - 100% Ecological Elaboration with products of organic origin.

A product of organic nature that, when added to the nutrient solution, increases the content of OH<sup>-</sup> hydroxyl ions, increasing the pH of the medium. The control and adjustment of the pH of the nutrient solution and the substrate is of vital importance because it affects the availability of nutrients and therefore their absorption by the root. Compatible with the entire DOCTOR LEAF product line.

**INSTRUCTIONS** - Measure the pH of the solution prepared with DOCTOR LEAF products for the irrigation of the crop. The ideal pH range should be 6.0 to 6.5 in substrate and 5.8 to 6.2 in hydroponics. If the pH is not adjusted between these values, pH<sup>-</sup> or pH<sup>+</sup> should be used to increase or decrease the pH. To do this, add the pH regulator drop by drop, stirring the irrigation solution before measuring the pH again. The amount to be added will depend on the amount of stock to be adjusted and the initial pH of the irrigation stock. After adjusting the pH, the irrigation solution is ready for use. Shake before using.

**100% ORGANIC FORMULATION** - Doctor Leaf pH Reducer has been carefully formulated with 100% natural and organic ingredients.
